

DNV GL SEASKILL™

CERTIFICATION OF COMPETENCE MANAGEMENT SYSTEMS

According to DNVGL-ST-0049

Are you on top of your present and future competence needs?
Are you capable of turning competence goals into business results?
DNV GL is offering certification of Competence Management Systems globally.

The certification of competence management systems is based on a standard developed by DNV GL SeaSkill™. It aims for competence management systems to continually improve the factors that effect the generation, maintenance and utilisation of competence. Competence Management Certification is a service for ship owners and managers, yards and authorities. It is uniquely designed to meet the requirements of the maritime industry, and takes into account both statutory requirements and the organisation's own goals.

The link between goal and competence

Why certify your competence management system?

Certification enables a company to design and calibrate processes that make up a successful competence management system. It provides management with a tool in the form of an external check to ensure that the system functions as it is meant to. Externally, a certification can be used to competitive advantage in dealing with customers, insurance providers, authorities and other stakeholders. It offers proof of an organisation's quality approach to competence management.

Aligning competence to business goals

In order to turn business goals into results, it is necessary for organisations to manage planning, development, utilisation and monitoring of competence. Continuous improvement, with defined processes and benchmarking should be the aim.
