SYNERGI GAS ADVANCED TOPICS WITH SCRIPTING

Course code: SY-27
Duration: 4 days

Prerequisite:
Completion of SY-25 Synergi Gas standard course and Synergi modelling experience. This course assumes you are proficient in the use of the latest version of the product.

DESCRIPTION

This course is designed and customized for the experienced Synergi Gas user. We presume basic knowledge of menus, interface and functionality, and therefore go into more detail on the more advanced features and niches of the product. After registering for this class, you will be given the opportunity to help shape its content, and the most popular responses and requests will go into the final agenda for the course.

Regardless of input we will dedicate part of the third and fourth days exclusively to scripting. Participation in this part of the course requires you come prepared with a procedure or operation that you wish to create using operating and/or master scripts. You will be provided with time to work independently on your script under supervision of DNV GL experts. The course concludes with a group discussion of the progress everyone has made with their scripts, and brainstorming of future ideas. In the past, popular topics for the bulk of this course, were supply tracing, system tracing, regulator stations, compressor stations and all modules (except USM).

LEARNING OBJECTIVES

As a course where the participants choose the topics, the objective is to provide broad knowledge to all attendees and go into the specialized niches of the product.

TARGET GROUP

Users who have attended the Synergi Gas standard course and/or have extensive experience using Synergi Gas. This course should ideally be taken after 2 or more years on the job experience.
