

SOFTWARE

SYNERGI PIPELINE SIMULATOR (SPS) TRAINER

Course code: SY-48
Duration: 3 days

Prerequisite:

Previous knowledge of Synergi Pipeline Simulator (SPS) is required, which could be from experience or from having taken the SY-45 Synergi Pipeline Simulator (SPS) standard course within the last six months. Some knowledge of pipeline operations and pipeline hydraulics is highly recommended.

DESCRIPTION

This training course enables engineers and technicians to understand, configure and use Synergi Pipeline Simulator (previously SPS) trainer simulators. A blend of lecture and hands-on workshops will ensure that you gain the knowledge to effectively and efficiently use the product. Interfaces for both SCADA-interfaced trainers and stand-alone trainers using operational interface displays will be addressed.

LEARNING OBJECTIVES

You will learn how to configure Synergi Pipeline Simulator trainer models, how to add scenarios for normal and abnormal operating conditions and how to configure and use the Operator Qualification module, and cover basics for configuring, using and editing operational interface displays.

TARGET GROUP

Users with prior Synergi Pipeline Simulator knowledge who will be supporting and/or maintaining Trainer Simulators for their organization.
