

DIGITAL SOLUTIONS

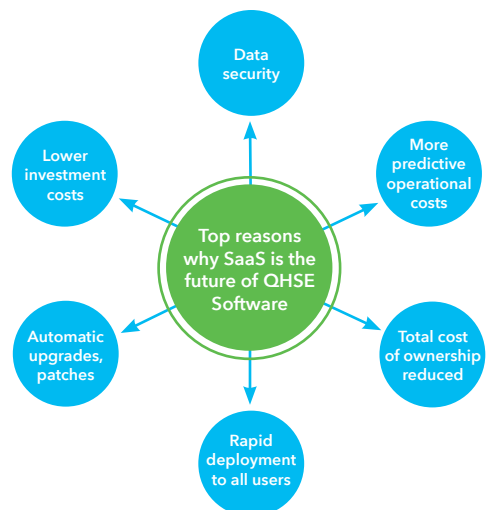

SYNERGI™ LIFE

Software-as-a-Service (SaaS)

Synergi Life - SaaS gives you our leading QHSE risk management solution with the advantages of utilizing cloud computing on the Microsoft Azure platform. This includes time savings, lower investment and maintenance costs, not to mention high performance, data security, flexibility and scalability.

Cloud solution for QHSE

SaaS solutions utilizing cloud technologies are becoming the mainstream and preferred model of deploying software solutions. They represent a way of rapidly and flexibly deploying best-of-breed software without the risks and challenges generally associated with hardware acquisition, system setup, backup and disaster recovery provisioning and ongoing costs of power, administration staff and data centre space. Among Fortune 500 companies, 85% are already using cloud solutions.

“Organizations are pursuing strategies because of the multidimensional value of cloud services, including values such as agility, scalability, cost benefits, innovation and business growth”, according to Sid Nag, research director at Gartner¹.

Synergi Life on Azure - availability and security in focus

Synergi Life has been designed and built specifically to utilize the power of the Azure platform, with its industry-leading security and data protection policies, highly resilient and robust architecture, delivering 99.99% availability globally. Azure is the ideal platform to ensure that you maintain ownership and control of your data, with the freedom for users to access their data from anywhere in the world with a working internet connection.

Data security with Synergi Life

Your data is securely managed in a Tier 3 (International Standard TIA 942) hosting facility fully accredited to numerous international standards, such as ISO 27000, ISO 27001 and SAS 70, meeting global data protection rules and regulations.

The Azure infrastructure is resistant to hacking, protecting the users' access and protecting customer data through encrypted communication and the handling and reduction of threats - including regular penetration testing. The Azure Security Center is continuously monitoring its data security status.

In addition to the physical data protection offered by our hosting partners, there are extensive logical controls in place to prevent unauthorized system access. No hosting party

PROCESSES SUPPORTED BY SYNERGI LIFE - SAAS SOFTWARE FOR QHSE MANAGEMENT:

- Best practice modules optimized for risk, control, audit, inspection, Incident, environment and contractor management processes
- Integrated workflows for everything from reporting, mitigation and control to advanced trending and analytics
- Optimized to support your business online, offline and on the go
- Role-based access to support your users
- Scalable for small and medium-size to large scale enterprise deployments

personnel will have logical (direct) access to the client data. All privileged user IDs involved in the management of the hosting framework follow the ITCS104 standards for tracking to individuals, logging and access revalidation.

Secure login is performed through Multi-Factor Authentication, and user identity data is collected in the Azure Active Directory. Standard transport protocols are used for data in transfer between user units and the data centres. For inactive data, there are a wide variety of encryption possibilities up to AES-256.

All the tools in Synergi Life

With Synergi Life - SaaS you have all the tools you need to manage QHSE (or HSE) non-conformances, incidents, risk, risk analyses, audits, assessments and improvement suggestions. Synergi Life is one of the world's most recognized software brands within environment, health and safety, according to Verdantix Global EH&S Survey 2016.
