SYNERGI™ LIFE

Consulting - Standard upgrade

Based on input from a usability survey, the Synergi Life software has changed its appearance. Our main focus has been to make Synergi Life easy to use.

Return on investment

An upgrade to Synergi Life v12 can rationalize your administrator's operations and data maintenance in Synergi Life, which in turn can reduce your company costs and provide an opportunity to raise the quality on your work with QHSE. The look and feel of the application has been simplified so all employees can use the system and view data from Synergi Life. We can help your company release this potential and get the full effect of these changes.

Upgrade benefits

- A modern user interface that is easier to understand and use
- Faster register and case handling processes
- Greatly improved overview of information in a case
- Easier to see the connection between several cases

- Reduced time used on administration
- Improved usability makes it easier for infrequent users

Step 1 - Synergi Life pre-upgrade heck

Before the upgrade starts, a pre-upgrade check of your Synergi Life installation is performed. This is a technical and functional review of your Synergi Life implementation. This impact study is undertaken to reduce risk and downtime during the upgrade, and will if needed allow for a more detailed estimate and work breakdown structure of the actual upgrade.

Step 2 - Synergi Life v12 upgrade

Physical upgrade of your existing Synergi Life installation to the latest version - v12 in test and production environment.
